The respect of the itinerary and particularly the passage by a certain number of waypoints will be controlled by STELLA equipment.

The following types of waypoints (see Supplementary Regulations) will be used:

- WPE (Eclipse Waypoint)
- WPS (Waypoint Safety)
- WPM (Masked Waypoint)

Depending on the waypoint type, the NAV-GPS directs the crews towards a waypoint only once they have validated the previous waypoint or if they have come within the opening radius of it. To validate a waypoint, the crew must pass within the validation radius of it. The exact opening and validation radiuses are listed in the below table:

Waypoint type	Opening radius	Validation radius
WPE	Previous WP (or 1000 m)	90 m
